Machine learning refers to a system capable of the autonomous acquisition and integration of knowledge. The primary objective of this course is to provide a broad introduction to machine learning, including discussions of the major approaches, basic principles, techniques, and applications of machine learning. The course gives the student the basic ideas and intuition behind modern machine learning methods as well as a bit more formal understanding of how and why they work.

Homework assignments, (The students will implement several machine learning algorithms.)

final exam,

This is a research oriented course, intended first to bring the students to the state of the art, and then to help them do a project and paper of publishable quality.

Prerequisites

٠

Reading Material:

Machine Learning by Tom M. Mitchell, McGraw Hill, 1997 Pattern Recognition and Machine Learning, Christopher M. Bishop, 2006
